Waypoint Studio

Build bold with AI. Arrive safely.

Secure AI & Cybersecurity Studio · Hamra, Beirut, Lebanon · Founded 2025

1. Who We Are

Waypoint Studio is a four-person, security-first AI studio based in Hamra, Beirut, a short walk from the American University of Beirut. We design, build, and attack AI systems for small and mid-sized businesses, NGOs, and cultural organizations — the organizations that benefit most from AI but can least afford a breach.

Our name comes from navigation: a waypoint is a known, safe point on a journey. We want to be that point for organizations travelling into AI: someone who has checked the route, knows where the hazards are, and helps them arrive safely.

2. Mission & Values

Mission: Make trustworthy AI accessible to organizations that need it most but can least afford a breach.

- **Attack our own work first.** Nothing ships until we have tried to break it.
- **Plain language.** Every finding is explained so a non-engineer can act on it.
- **Your data stays yours.** We never use client data to train models, and we minimize what we collect.
- **Craft over volume.** We take a limited number of projects at a time so each gets senior attention.

3. Services

3.1 Secure AI Agent Builds

Custom chatbots and AI agents — customer support, lead capture, booking assistants, and internal knowledge assistants — built with guardrails against prompt injection, jailbreaks, and data leakage. Each build includes tool-use design, logging, a red-team report, and two weeks of post-launch support.

Price: Starter package from USD 2,500 (one channel, up to 2 tools). Larger builds are quoted after a Discovery Call. **Typical timeline:** 3–6 weeks.

3.2 Breach Rehearsal — AI Red-Team Audit

We attack your existing LLM application (chatbot, RAG system, or agent) using the OWASP Top 10 for LLM Applications as a baseline: prompt injection, insecure output handling, sensitive information disclosure, excessive agency, and more. You receive a plain-language report ranked by severity, with concrete fixes, plus a 1-hour walkthrough call.

Price: USD 1,200 fixed, for a single application. **Timeline:** 2 weeks.

3.3 Small Business Security Health Check

A two-week review of the basics that cause most real-world incidents: phishing exposure, multi-factor authentication, backups, office Wi-Fi, password practices, and cloud/email account configuration. Ends with a prioritized 30-day action plan.

Price: USD 600 for organizations with up to 25 staff.

3.4 Carry-On Security

Digital-safety preparation for travelers, journalists, researchers, and remote teams: device hardening, account lockdown, safe use of public Wi-Fi and border crossings, and a printed & digital travel safety kit.

Price: USD 90 per person (1:1 session, 90 minutes) or USD 400 for a group workshop of up to 15 people.

3.5 Studio Shield

Security and responsible-AI support for galleries, bookshops, musicians, photographers, and other creatives: website and social-account protection, protecting creative work and intellectual property online, and guidance on using generative AI tools responsibly.

Price: Quoted per project after a Discovery Call.

3.6 Phish & Chips — Awareness Sessions

Friendly 60-minute lunchtime sessions that teach teams to recognize phishing, social engineering, and AI-generated scams (voice clones, deepfake invoices). Delivered on-site in Beirut or online.

Price: Included free with any Health Check; otherwise quoted on request.

4. Pricing Summary

Service	Price	Timeline
Secure AI Agent Build (Starter)	From USD 2,500	3–6 weeks
Breach Rehearsal (AI red-team audit)	USD 1,200 per application	2 weeks
Small Business Security Health Check	USD 600 (up to 25 staff)	2 weeks
Carry-On Security (individual)	USD 90 per person	90-minute session
Carry-On Security (group)	USD 400, up to 15 people	Half day
Studio Shield	Quoted per project	Varies
Phish & Chips session	Free with Health Check; otherwise on request	60 minutes
Discovery Call	Free	30 minutes

Payment terms: 50% at kickoff, 50% on delivery. NGOs registered in Lebanon receive a 15% discount on all fixed-price services.

5. The Team

Marwa Deeb — Founder & Principal Security Engineer

Holds a Master of Engineering (ME) in Cybersecurity from the American University of Beirut. Leads every Breach Rehearsal personally and sets the studio's security standards. A traveler and avid reader, Marwa brings a "pre-flight checklist" mindset to security: calm preparation beats panic. Specialties: LLM application security, threat modeling, and agentic systems.

Karim Saab — Lead AI Engineer

Builds and evaluates the studio's AI agents, from tool design to retrieval pipelines and evaluation suites. Previously built NLP systems for Arabic customer-service platforms.

Lea Khoury — Design & Client Experience Lead

A former gallery curator who makes sure every report, dashboard, and chatbot is clear and humane for non-engineers. Leads the Studio Shield service for creative clients.

Jad Nassar — Training & Awareness Lead

Designs and delivers the Phish & Chips sessions and Carry-On Security workshops. Known for turning dry security policy into memorable stories.

6. What Makes Us Different (Unique Value Proposition)

- **Built and broken by the same team:** every agent we build ships with its own red-team report — we attack our own work before we hand it over.
- **Security and AI under one roof:** most studios build AI and leave security to someone else; most security firms audit but don't build. We do both.
- **Studio-quality communication:** reports designed to be read, not filed away.
- **Local and multilingual:** Beirut-based, working in English, Arabic, and French, with an understanding of the region's realities (unstable connectivity, shared devices, and cash-based small businesses).

7. How to Work With Us

1. **Discovery Call** (free, 30 minutes): we learn your goals and risks.
2. **Proposal**: a fixed-scope proposal within 3 business days.
3. **Kickoff**: 50% payment, shared project channel, weekly check-ins.
4. **Delivery**: handover, report walkthrough, and post-launch support.

8. Frequently Asked Questions

How fast do you reply? Within one business day for every inquiry.

Do you work remotely? Yes — with clients across MENA and Europe. Workshops can be online or on-site in Beirut.

Will you use our data to train AI models? Never. Client data is used only for the agreed project and deleted or returned at the end.

Which AI models do you build with? We are model-agnostic and choose based on your budget, privacy needs, and language requirements, including models that can be hosted on your own infrastructure.

Do you offer discounts? NGOs registered in Lebanon get 15% off fixed-price services. We do not offer other discounts.
